**30 Years Of Supplying The
Highest Quality Purge Dams
And The Only Thing To Disappear
Is The Dam Itself.**

DISSOLVO

Dissolvo® Water-Soluble Purge Dams For Your TIG Welding Needs

Trusted For Over 30 Years.

Welders all over the world rely on Dissolvo® water-soluble purge dams for the easiest application and best performance for their Tungsten Inert Gas (TIG) welding or Gas Tungsten Arc Welding (GTAW) needs. They trust our purge dams to completely disappear, thus leaving NOTHING behind but the cleanest possible weld.

Perfect for the widest range of applications.

For the smallest size pipes (4" diameter or less) to larger pipes (28" plus), Dissolvo® water-soluble purge dams provide a simple, cost-effective method of preparing the pipe prior to introducing the purge dam gas.

Applications include:

Chemical plants	Utility plants
Breweries	Pipelines
Shipyards	Paper mills
Fabrication shops	And more

Easy to use

Simply cut to size, attach with tape, and you're ready to weld. After you're done simply flush with water or steam and our Dissolvo® purge dams disappear entirely with no residue or trace elements. Dissolvo® water-soluble papers and purge dam tapes are non-toxic and non-corrosive. All you leave behind is clean, oxidations-free welds.

Compare the ease and speed of Dissolvo® Water-Soluble Purge dams to other, more complicated purge dam techniques, such as bladders. In many cases, the Dissolvo® purge paper and tape is the only solution, such as times when there is no means of retrieval.

Trusted quality and service.

The reasons welders trust only Dissolvo® brand products include the consistent quality of our water-soluble paper and tape, the level of expertise and service we provide before and after the sale, and most importantly, the quality of the resulting welds.

A history of dedication to TIG welding.

In the early 1960s, the experts at Dissolvo® joint-developed water-soluble paper technology. In August of 1971, nearly a decade later, we discovered that water-soluble paper would help create a purge dam that didn't need to be removed from a pipe after welding. This discovery made TIG welding easier and faster, as well as allowing for cleaner, oxidation-free welds. We received the patent for this application in 1973.

For more than 30 years, we've worked hard to maintain the quality of our products and provide the level of service you'd expect from the company that invented water-soluble purge dams. We've helped a majority of the world's TIG welders with their first use of the water-soluble purge dams and have worked hard to assure they receive the right products and the right answers... right away.

Put your mind at ease.

Why trust your critical welds to an inferior or untested purge dam? For more details on genuine Dissolvo® Brand Water-Soluble Purge Dams and recommended applications, contact your Dissolvo® distributor, visit www.dissolvo.com, or contact Dissolvo® directly by e-mailing us at info@dissolvo.com or calling 1-877-823-3388.

Did you know...?
Genuine Dissolvo® water-soluble paper is now being used as disappearing targets for the most popular brand of water guns. (for other innovative uses, visit www.dissolvo.com)

If it doesn't say genuine Dissolvo®, then it isn't genuine Dissolvo®.

Did you know...?
Genuine Dissolvo® water-soluble paper is strong enough to dam argon and any other inert gas while purging.

We developed and patented the purge dam application of our water-soluble paper in the early 70s.
